

PMS — Activity Diagrams

Business actions only · No API routes · Multi-Tenant · Roles: Student · Supervisor · University Admin · Platform Admin

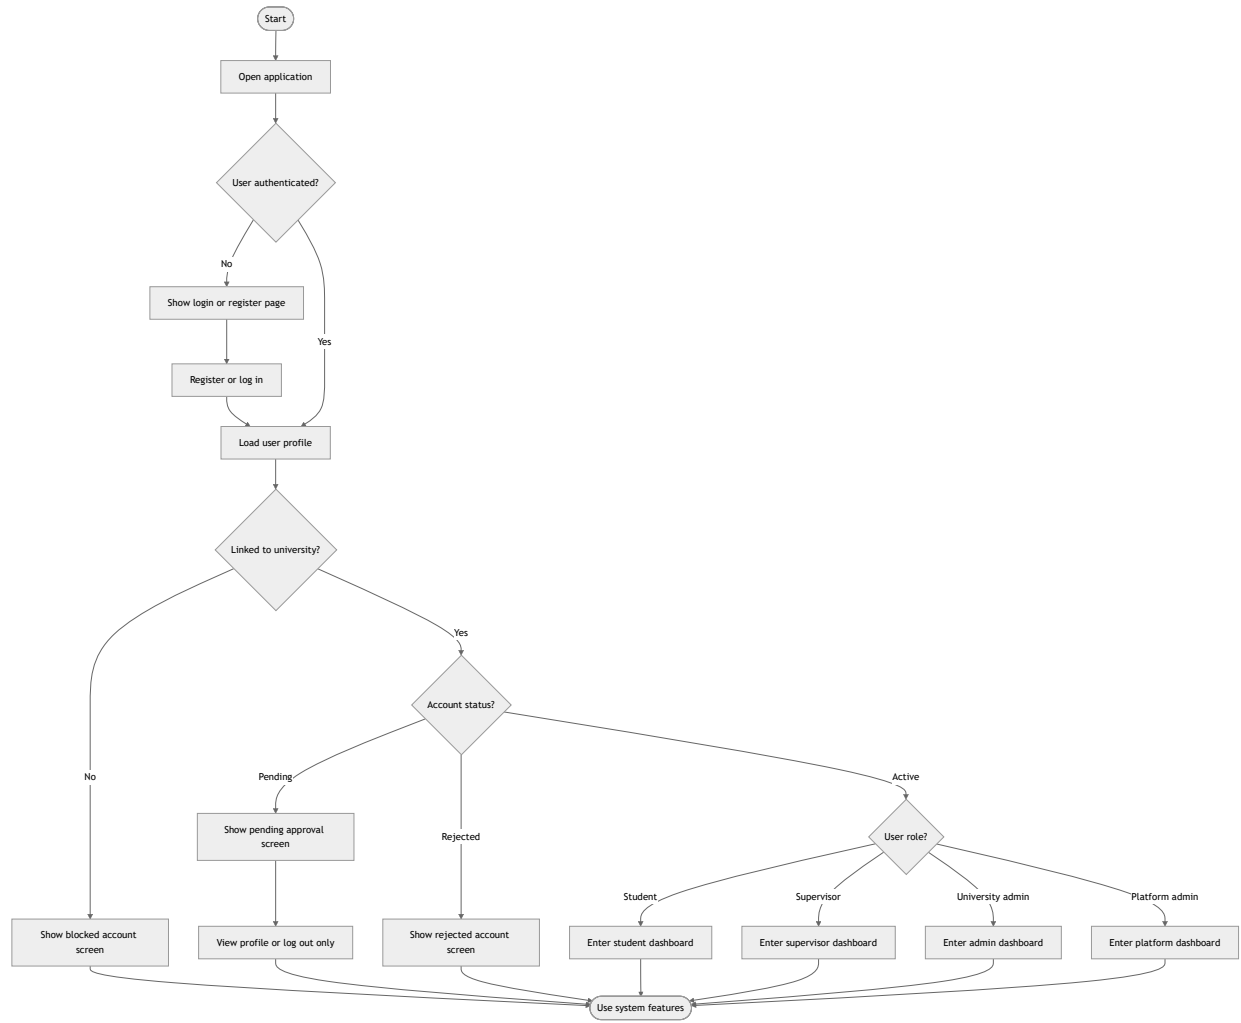

Table of Contents

1. System Overview
2. Authentication and Registration
3. Account Approval
4. Profile and GitHub Linking
5. Dashboard
6. Project Management
7. Invitations — Supervisor and Student
8. Task Management
9. Comments
10. Project Releases and GitHub
11. Activity Log (Project Timeline Tab)
12. Artificial Intelligence
13. Notifications
14. University Administration
15. Platform Administration

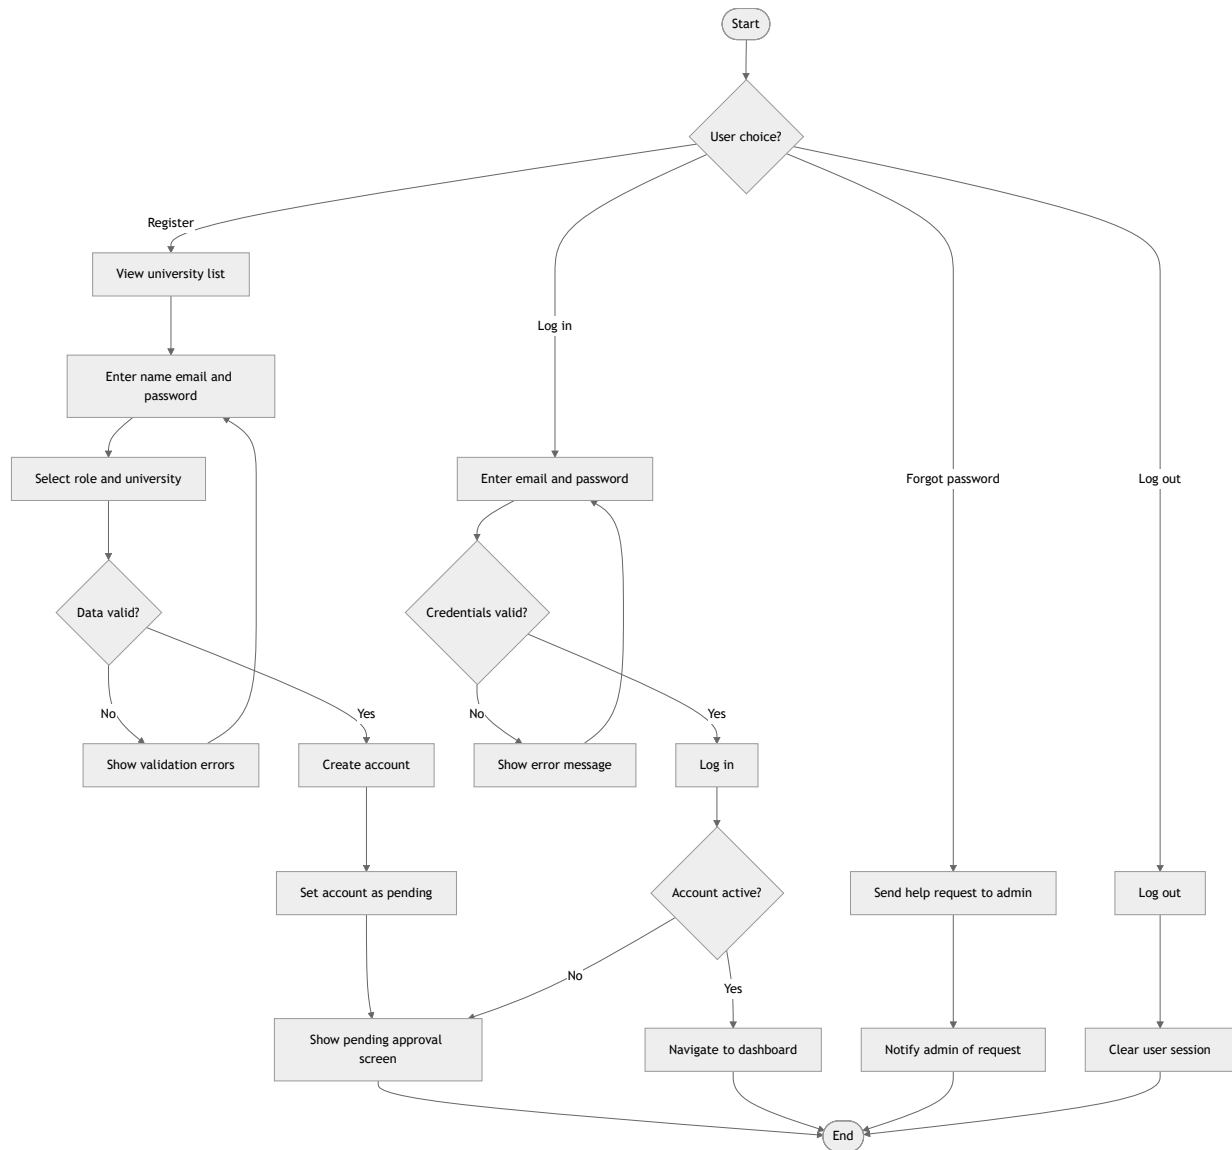

Complete System Actions

Domain	Actions
General	Open app · View university list · Load profile · Log out
Authentication	Register · Log in · Request password help
Approval	Wait for approval · Review pending · Approve · Reject · Activate · Reject all memberships · Re-register after rejection
Profile	View profile · Update details · Change password · Update supervision availability · Link GitHub · Unlink GitHub
Dashboard	View summary · View alert badges
Projects	List projects · Create · Open project details · Update · Delete · View progress · View members · Sync commits · View commits · View activity log · Leave supervision
Invitations	Browse supervisors · Invite supervisor · View supervisor invitations · Accept · Reject · Browse students · Invite student · View student invitations · Accept · Reject
Tasks	View tasks · Create · Update · Change status · Delete · Recalculate progress
Comments	Add project comment · View project comments · Edit comment · Delete comment (project-level only — no task comments in UI)
Versions	List releases · Upload release · Edit release info · Delete release · Open or download file · Push to GitHub (no version timeline in UI)
Activity log	View project activity log · Filter by tasks · releases · or team events (separate tab — not a version list timeline)
AI	Request project suggestions · View suggestions · Save idea · View bookmarks · Delete bookmark · Generate tasks
Notifications	Send notification · View list · View unread count · Mark as read · Mark all read · Delete · Delete all
University Admin	View users · Create · Update · Delete · View pending · Approve · Reject · Handle password reset requests
Platform Admin	View statistics · Manage universities · Manage users · Manage projects

1. System Overview

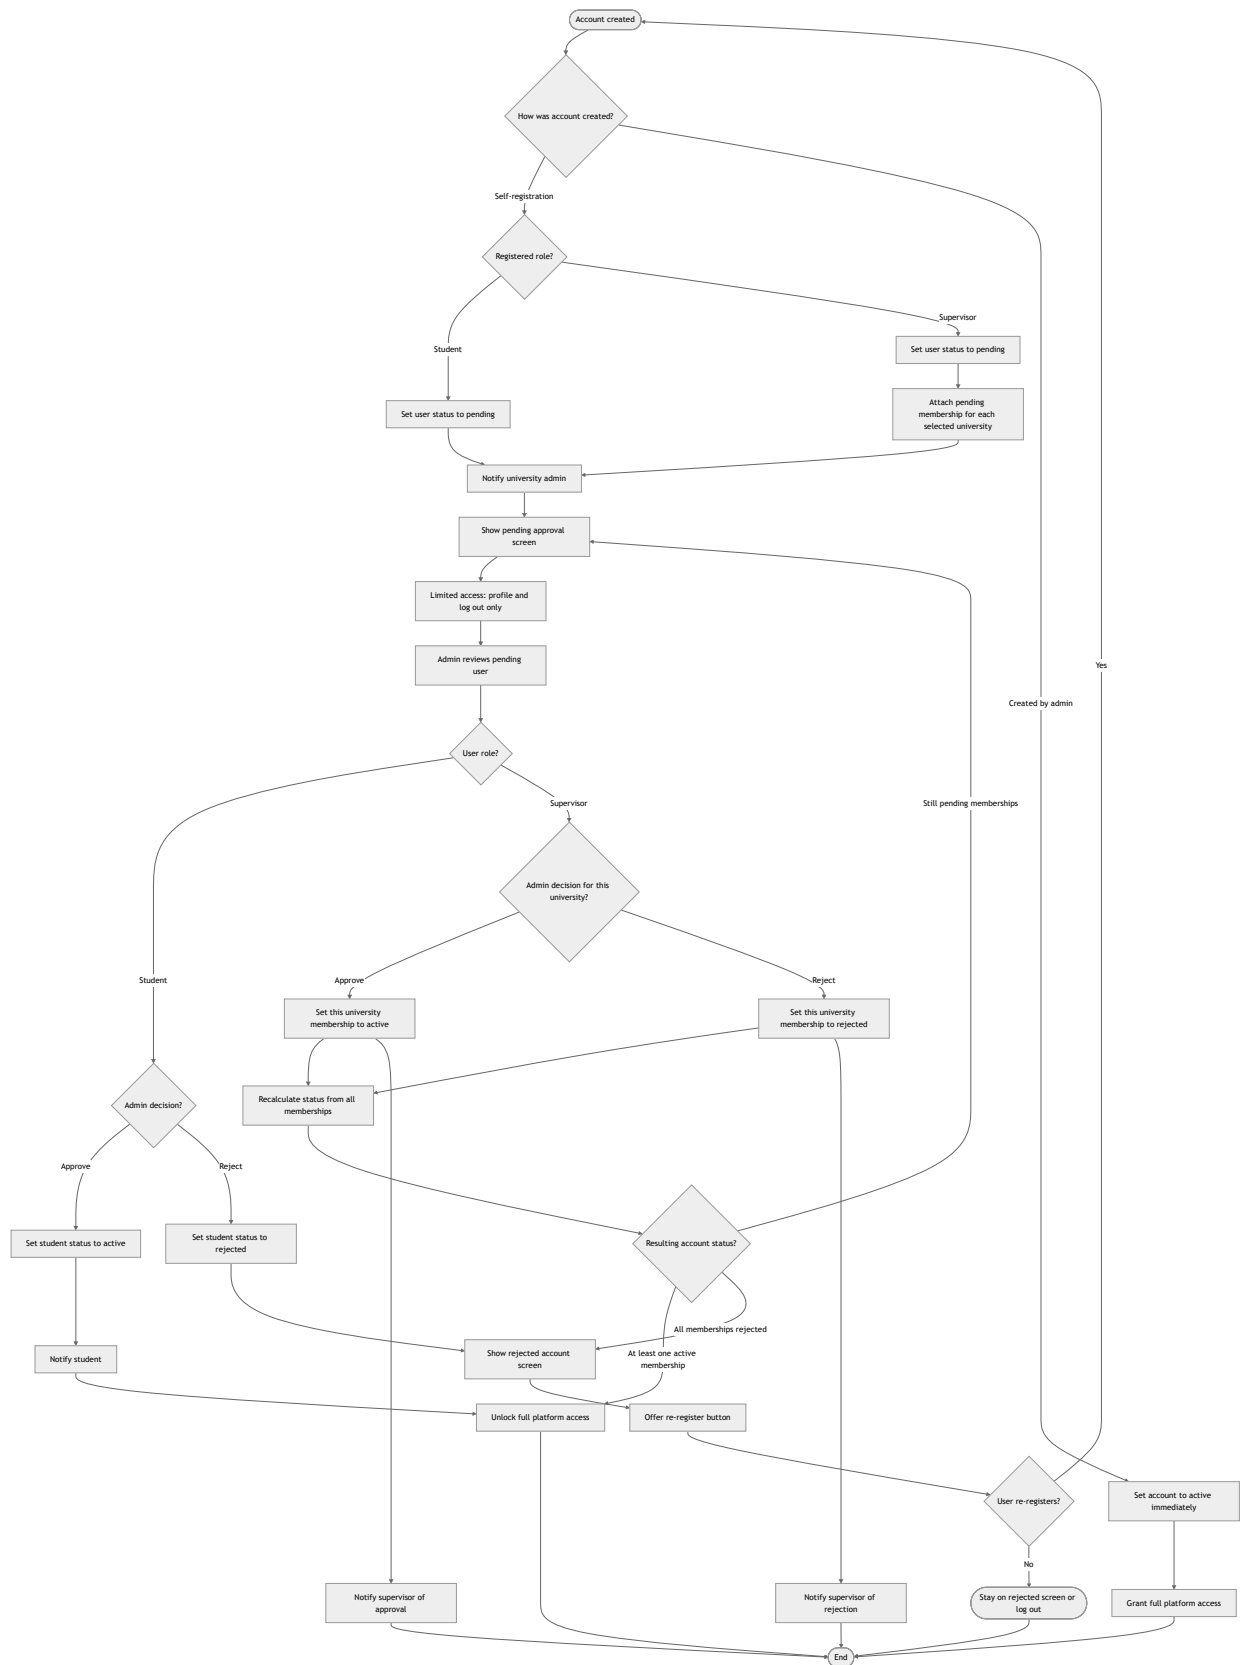

2. Authentication and Registration

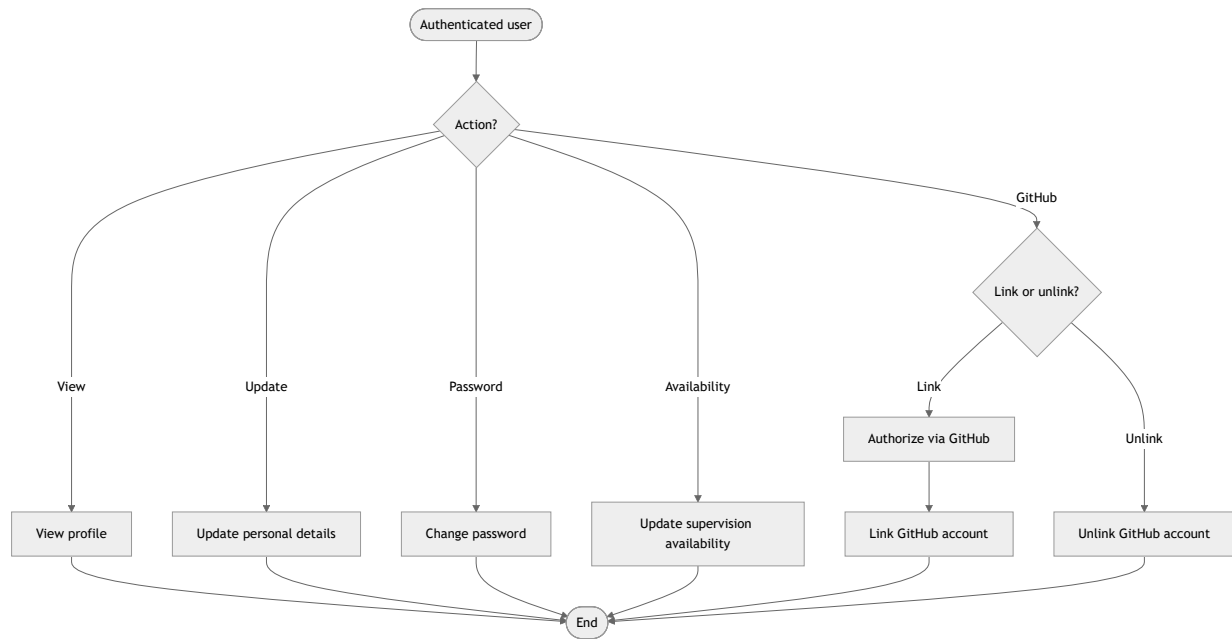

3. Account Approval

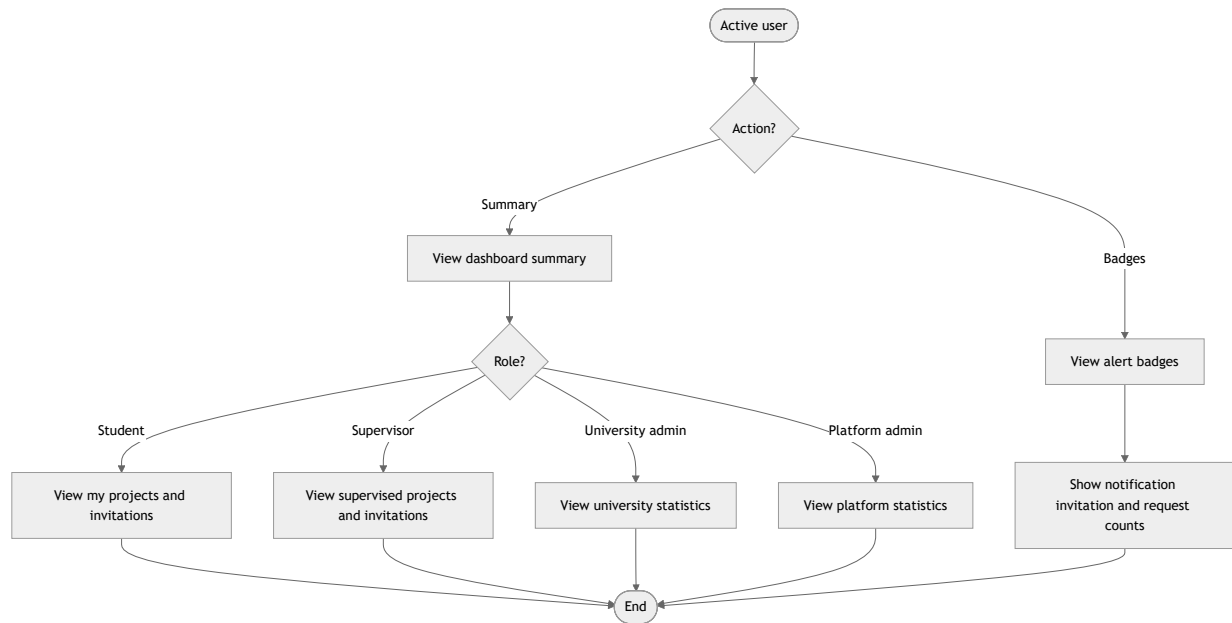

How it works in PMS: Self-registration is allowed for *student* and *supervisor* only. While **pending**, the user sees the waiting screen with limited access (profile and log out only). **Supervisors** may select multiple universities — each admin approves or rejects only their own university. After every decision, `refreshAccountStatusFromMemberships()` sets: *active* if any membership is active · *pending* if some memberships are still waiting · *rejected* only when **every** membership is rejected. Rejected users see a different screen with a **re-register** button (same account email can submit a new request).

4. Profile and GitHub Linking

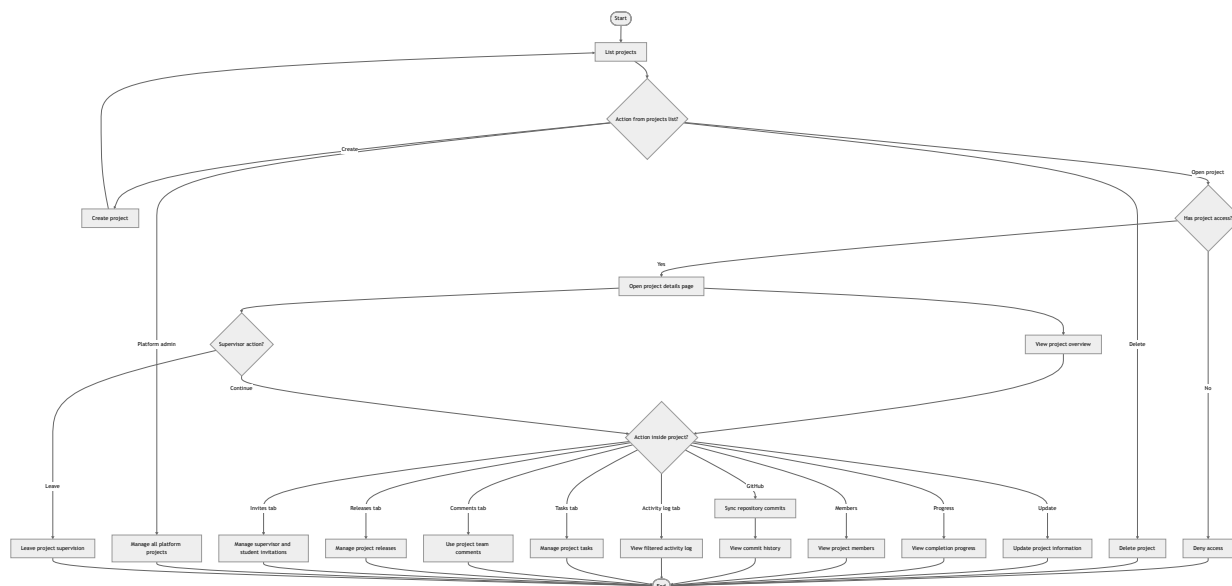

5. Dashboard

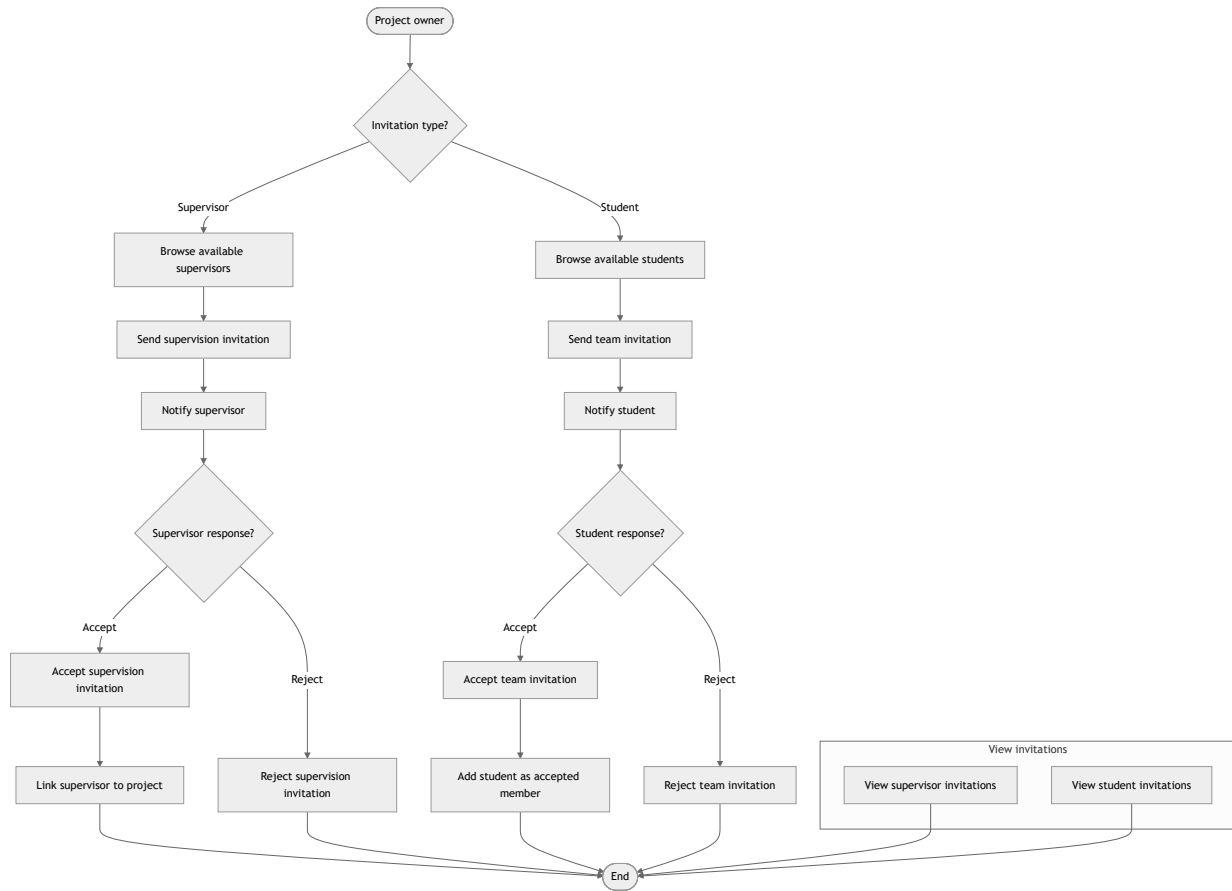

6. Project Management

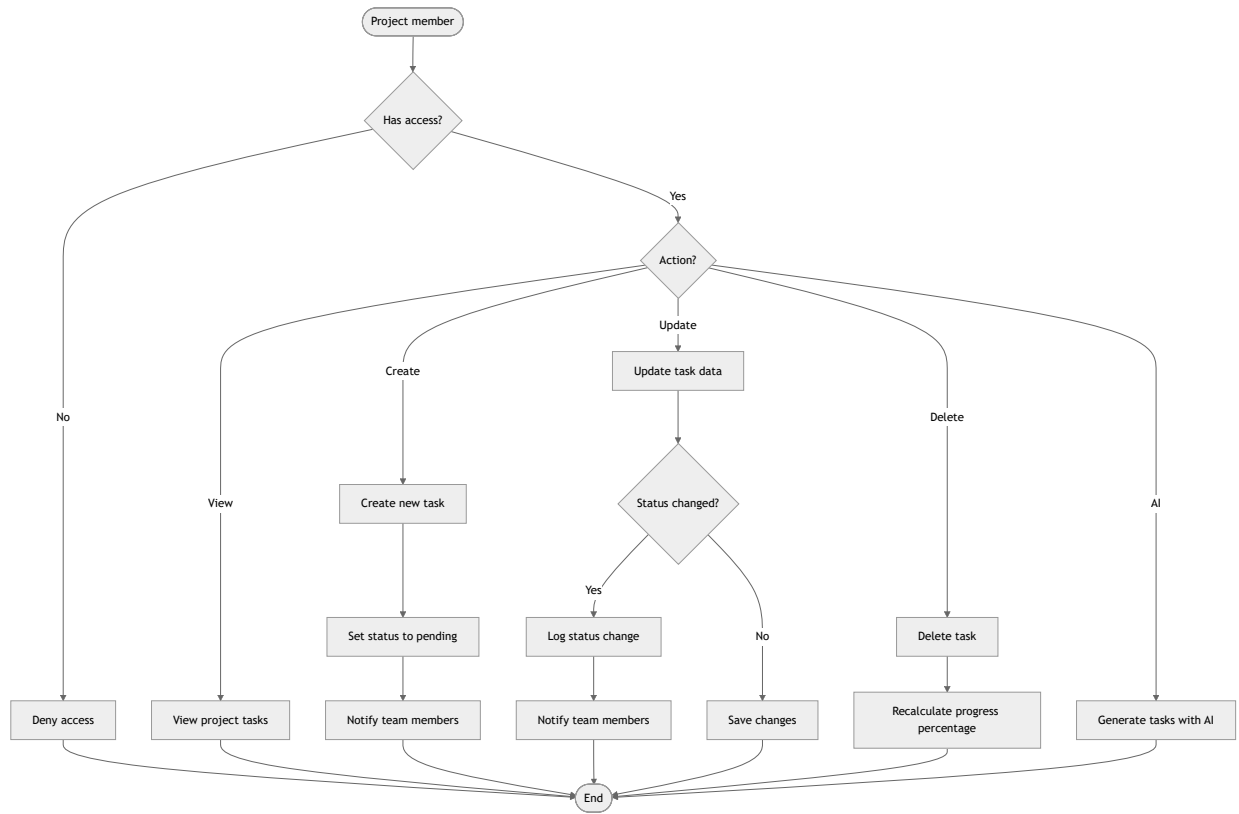

Structure in PMS: Users first *list projects*, then *open a project* to enter the project details page (Overview tab). Access is checked **before** opening the project — not after viewing details. Inside the details page, separate tabs handle tasks, comments, releases, and activity log.

7. Invitations — Supervisor and Student

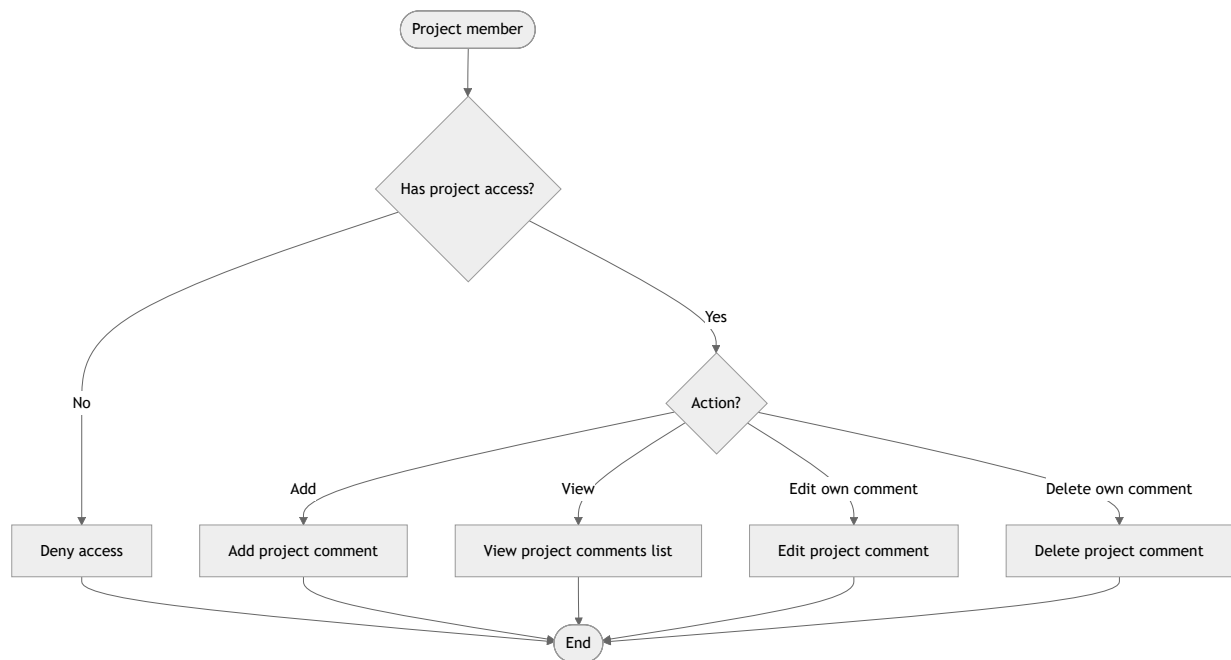

8. Task Management

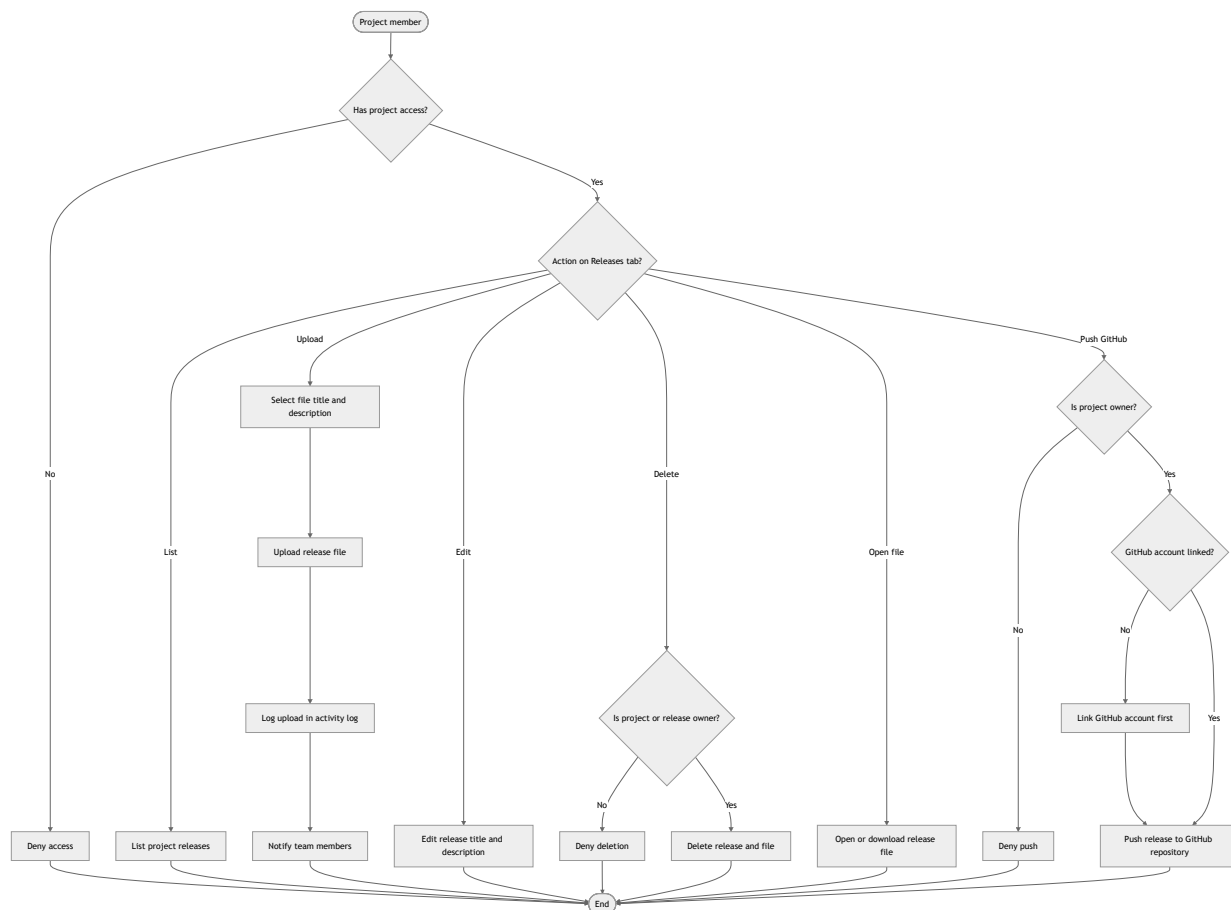

9. Comments

Verified in codebase: The application UI supports **project-level comments only** (team chat on the Comments tab). There is no task comment screen in the frontend, although the backend exposes task-comment endpoints.

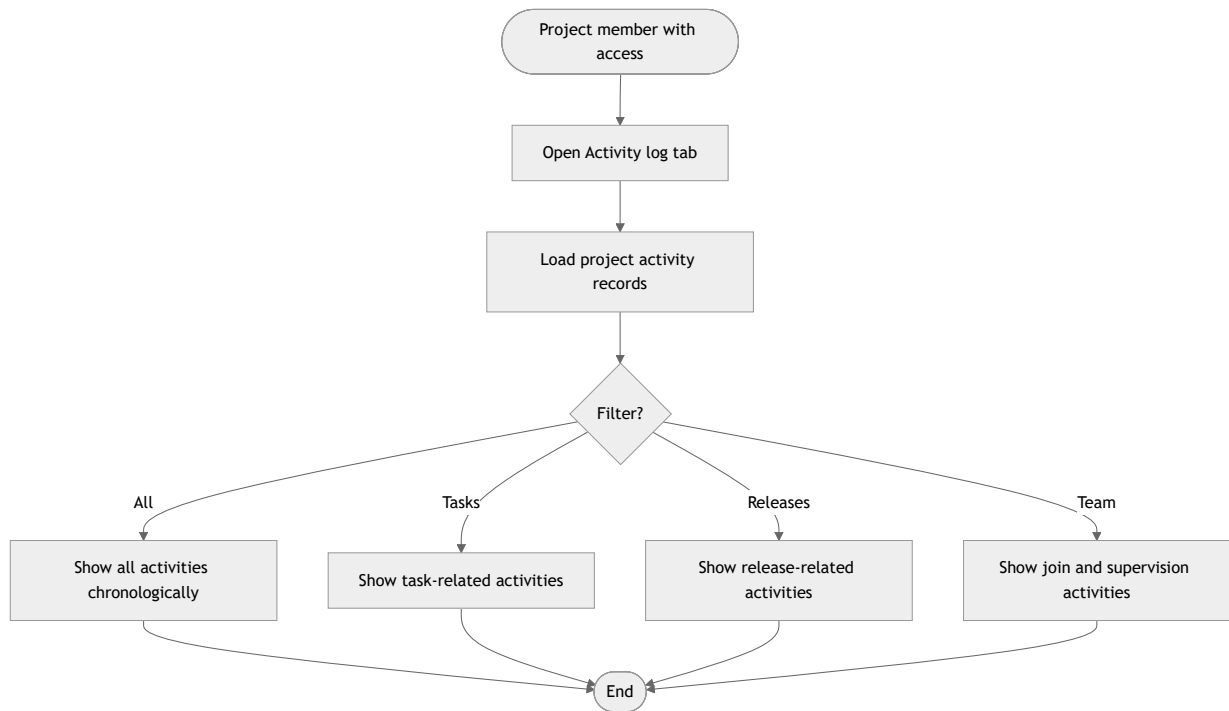

10. Project Releases and GitHub

Verified in codebase: The *Releases & files* tab lists uploads, supports upload / edit / delete / push to GitHub. There is **no version timeline view** in the UI. The separate *Activity log* tab shows all project events (tasks, releases, team) — it is not a release timeline.

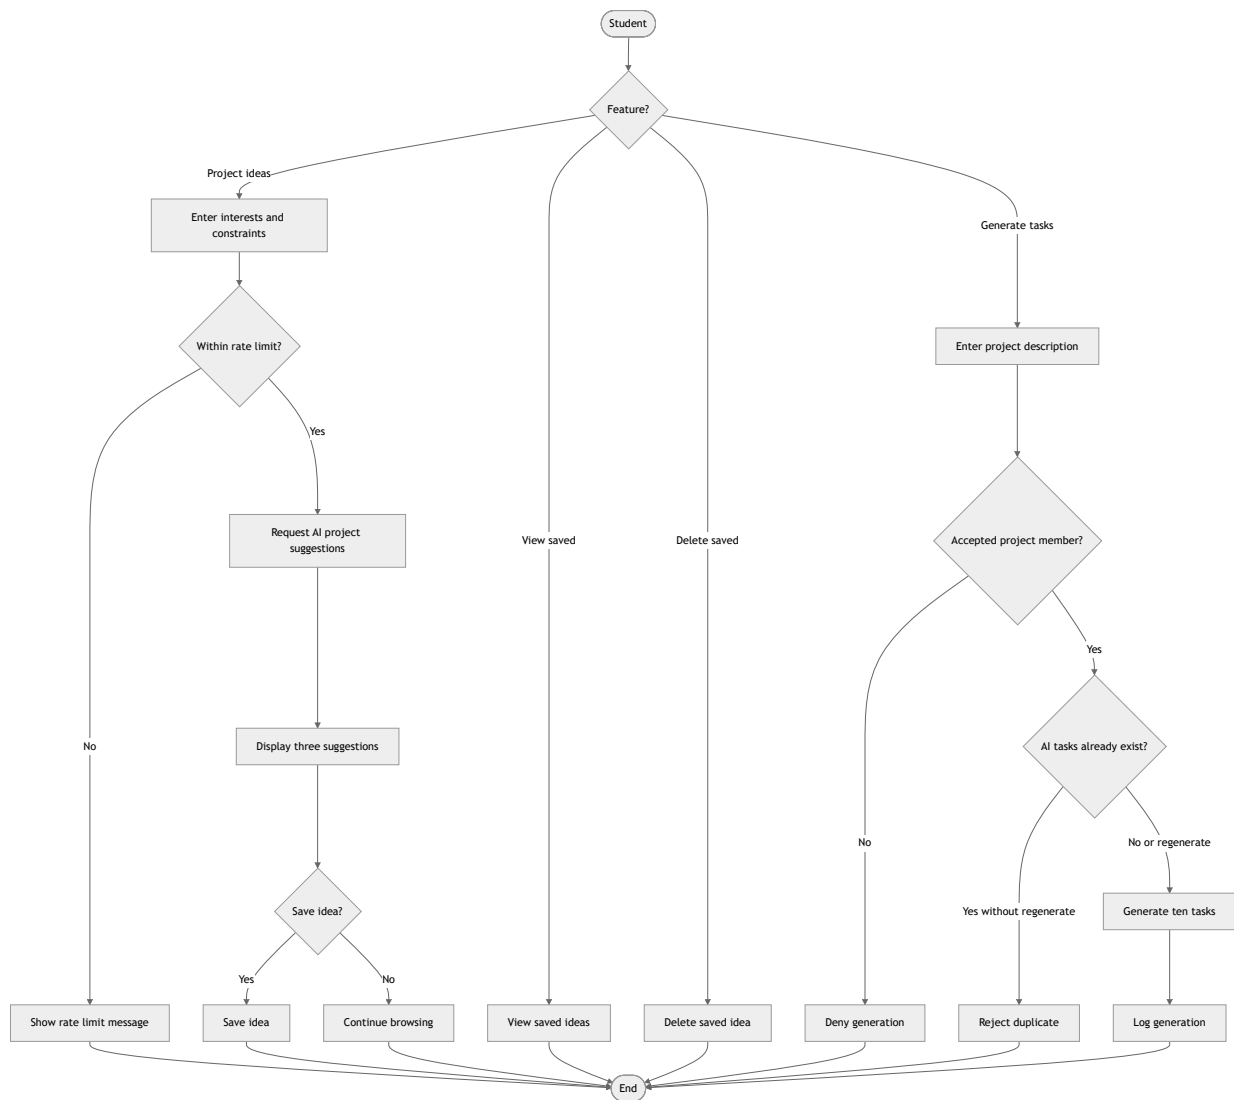

11. Activity Log (Project Timeline Tab)

This is the **Activity log** tab inside project details — not a release timeline. It reads from *project activities* and can be filtered by tasks, releases, or team events.

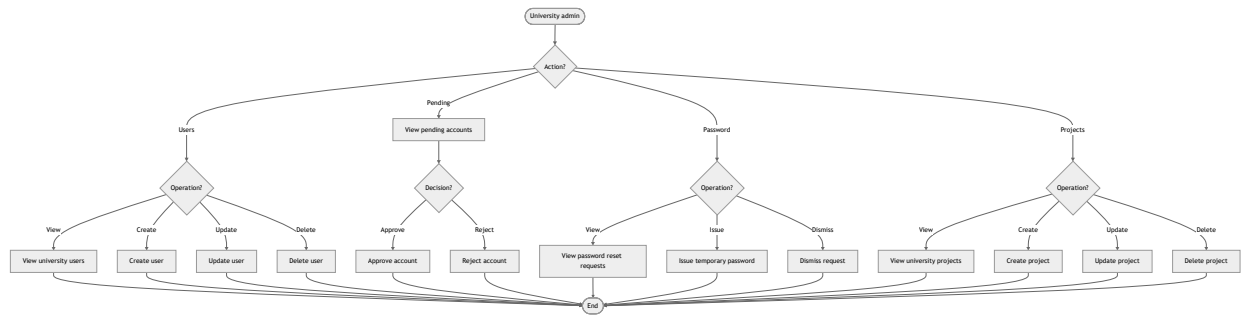

12. Artificial Intelligence

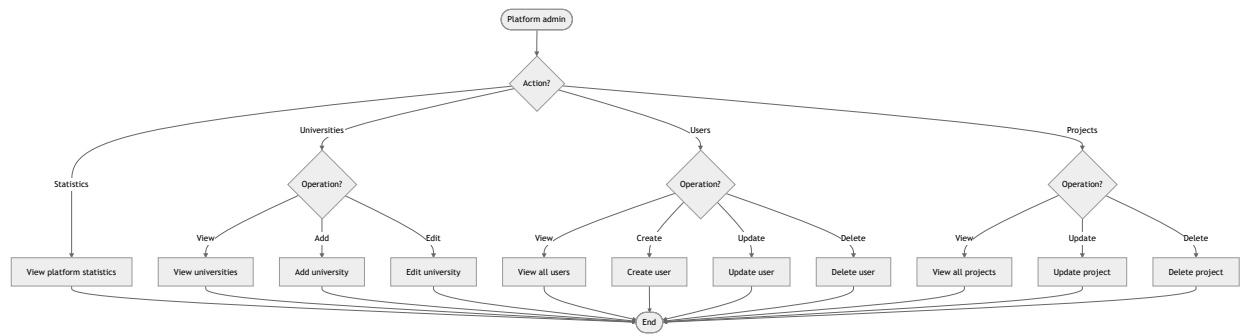

13. Notifications

14. University Administration

15. Platform Administration
